

Flask

Phase-0

- website is a collection of webpages where we can visit using browser
- web application
- Framework is a like toolbox where ready made parts available with the help of these we can make website.

→ Response / Request Cycle

- 1) our browser sends a request to google
- 2) Google's server receives the request.
- 3) The server processes the request.
- 4) The server sends back a response.
- 5) ~~your~~ our browser displays the response as a webpage.

URL → uniform resource locator

→ status code

Every response comes with a status code, like a small not saying "Success" or "Error".

i)	200	OK	Everything went well
ii)	404	Not found	Page does not exist
iii)	500	internal Server Error	Server crashed or has a bug
iv)	301	Moved permanently	The page has moved to another URL
v)	403	forbidden	you're not allowed to see this - SPS

- HTTP/HTTPS → Rules for communication b/w browser and server.
- Request → our browser asking for something (a page, data)
- Response → The server's reply with what we asked for
- Status code → A code that tells us if the request worked or failed
- Browser → The software you use to access websites
- URL → Address of webpage
- server → The computer that stores and runs the website.
